

3 SAFETY LEVELS for your family

EFFECTIVE PROTECTION

Safety plays a very important role in our lives, and when it comes to the proper protection of our home, we want to choose the best and most effective solution. Certainly aluminium external roller shutters are one of them. They protect our domestic premises, constitute an additional barrier to the outside world discouraging any potential burglar to force entry.

01

RIGHT CHOICE

It is generally approved that every roller shutter is anti-burglary, but this is not entirely true. Standard roller shutters can act as a deterrent to unwanted intruders, but in reality they do not have the appropriate security features to guarantee effective protection against burglary. Only the selection of an appropriate system and its proper installation guarantee effective protection against uninvited guests.

WELL THOUGHT-OUT TECHNOLOGY

Thinking about Investors for whom security is of particular importance, Aluprof has designed two anti-burglary roller shutter systems and roller shutter system with impeded access, which depending on the needs, have different types of protection. The proposed anti-burglary constructions can be used in both front-mounted and under plaster systems. The colour palette of roller shutter construction elements available in our offer will surely allow you to match the window joinery, and thus meet the needs of even the most demanding users.

WHAT ARE THE BENEFITS OF external roller shutters?

SAFETY – roller shutters may discourage a potential burglar. As a result, we can feel safe in our home.

ACOUSTIC INSULATION – roller shutters help to reduce the noise coming from the outside.

EXCELLENT THERMAL INSULATION – roller shutters significantly reduce heat loss through windows and doors in the winter season.

SUNSHADE – roller shutters perfectly protect rooms from overheating in summer.

PRIVACY – roller shutters provide effective protection against intruders therefore we can feel comfortable in our home.

WINDOW PROTECTION – roller shutters effectively protect window joinery against harmful external factors such as: wind, rain or direct sunlight.

SAVINGS – roller shutters contribute to the reduction of expenses for heating in winter and air conditioning in summer.

PEACEFUL REST - thanks to the use of intelligent control, roller shutters can be managed and scenarios created from anywhere and anytime.

LET'S BUILD A BETTER FUTURE

ALUPROF ANTI-BURGLARY ROLLER
SHUTTER SYSTEMS

SAFETY Premium

Anti-burglary roller shutter system Aluprof Safety Premium is a highly technically advanced product, which thanks to the design of innovative structural elements has successfully passed specialized tests and was the first system in Poland to receive the RC3 class of burglary resistance. Effective protection is guaranteed here by, among others, reinforced construction of guide channels, which does not allow for bending and pulling out the roller shutter profiles and special reinforcement in the endslat, ensuring high rigidity and stability of the curtain. In addition, adequately strong and durable construction of roller shutter curtain made of extruded aluminium profiles prevents any damage during impact. In addition, the latch system in the lower part of the roller shutter prevents the closed roller shutter from being lifted, which guarantees effective protection of the house.

SAFETY Plus

Aluprof Safety Plus anti-burglary roller shutter system is a proposal addressed to investors for whom security issues are of vital importance and are looking for a certified solution at an affordable price. The main advantage of the product is a specially developed latch system in the endslat, which makes it difficult to lift the roller shutter curtain when attempting to open manually the shutter from the bottom and enter into the property. Thanks to the reinforcement of the guide channels and the bottom endslat, it is also difficult to pull out single roller shutter profiles and thus dismantle the curtain. Its robust and durable construction, made of extruded profiles PE41 provides increased resistance to impact. The proposed solution has been successfully tested in a research institute and has been certified in the RC2 burglary resistance class.

SAFETY Basic

Aluprof Safety Basic roller shutter system with impeded access is a solution which at first glance does not differ from a standard roller shutter. It was created mainly for investors who are not particularly interested in certified products. An additional reinforcement of the end slat and the latch system in the endslat used in the Aluprof Safety Plus option, is used in the product. The latch system makes it difficult to lift the roller shutter curtain when attempting to open manually the shutter from the bottom and enter into the property. Moreover, the roller shutter curtain, which is made of profiles filled with polyurethane foam, is fixed to the round reel by means of reinforced brackets called Octoeasy, which are difficult to unfasten in comparison to those used in the standard option. Thanks to these procedures, the external roller shutter is an effective barrier against uninvited guests.
